"There are no lessons that waste the game-play time of our lives
Whether it's a failure or a success, you will always learn something that helps you level up"

Resume Profile

I am a dedicated Italian professional with a forward-looking vision deeply rooted in the transformative potential of Artificial Intelligence. My primary career objective is to expand my technical expertise and contribute to cutting-edge projects within the AI sector. Over the past years, I have built a versatile professional background as an IT Consultant for various firms, where I mastered hardware and software infrastructure, advanced cybersecurity protocols, and digital brand management. During my academic journey at the University of Turin, I solidified my expertise by developing a robust theoretical foundation in mathematical model construction, complex data analysis, and information security. This path culminated in a Bachelor's thesis where I developed a custom supervised learning model specifically designed to detect and analyze business anomalies. I am now prepared to translate this rigorous academic training into practical, high-impact solutions for Artificial Intelligence development. My professional philosophy is defined by a constant commitment to self-improvement, proactive problem-solving, and the continuous refinement of my technical skill set to meet the challenges of the evolving digital landscape.
